

PC Remote Control

On Demand Remote Support

Asset Management

Classroom Instruction

Desktop Protection

Background

East Aurora School District #131 has 2000 employees and 3000 PC's.

The Challenge

I inherited a school district network when I came onboard last July. I needed to get a handle on our inventory, location, age of machine, which OS, etc.

Situation

I like that NetSupport DNA allows me to monitor the activity of a certain individual (covertly) by giving me reports of their web sites and applications they have been using. I like that I can follow him where ever he goes in our network. It's great that I can also run reports on all the software and hardware information for each PC - this has been a valuable tool.

NetSupport Solution

DNA has proven to be invaluable as we are able to ensure the district's employees only use our assets for educational purposes. We have been able to streamline our machines by utilizing the vast reporting tools in DNA. It has saved our tech department a lot of time as we use the software distribution to push out updates. Finally, it is so easy to use that my training time is minimal.
